

Rule 105: Joint Ownership

As defined, joint ownership of an animal can include up to four memberships. Selling of a joint-owned animal requires approval from all members included in the ownership. Any owner listed can register progeny of the dam. Progeny of a joint owned animal must have all owners listed as the breeder of the progeny, and will be given all herd prefixes of those breeders. Any joint owner may submit flush reports for a joint owned animal. The member submitting the flush report will be the owner of the embryos.

Rule 306:

Transfer of Bred Doe When a doe has been transferred subsequent to being serviced but prior to the birth of her kid(s), and the service was not reported on the transfer application,

A. The breeder (owner of record of the dam at the time of service) must provide a service memo with all required signatures to register any resulting offspring.

B. If a pregnant recipient doe is being sold, the owner of the embryo(s) must sign an application for transfer of embryo ownership. Failure to sign will indicate the seller of the animal is retaining ownership of the resulting offspring.

C. Any progeny registered from the sale of a bred doe or a recipient will have the original breeder listed as the breeder and will be given the herd prefix of that breeder.
